ZONES

Toddler Zone

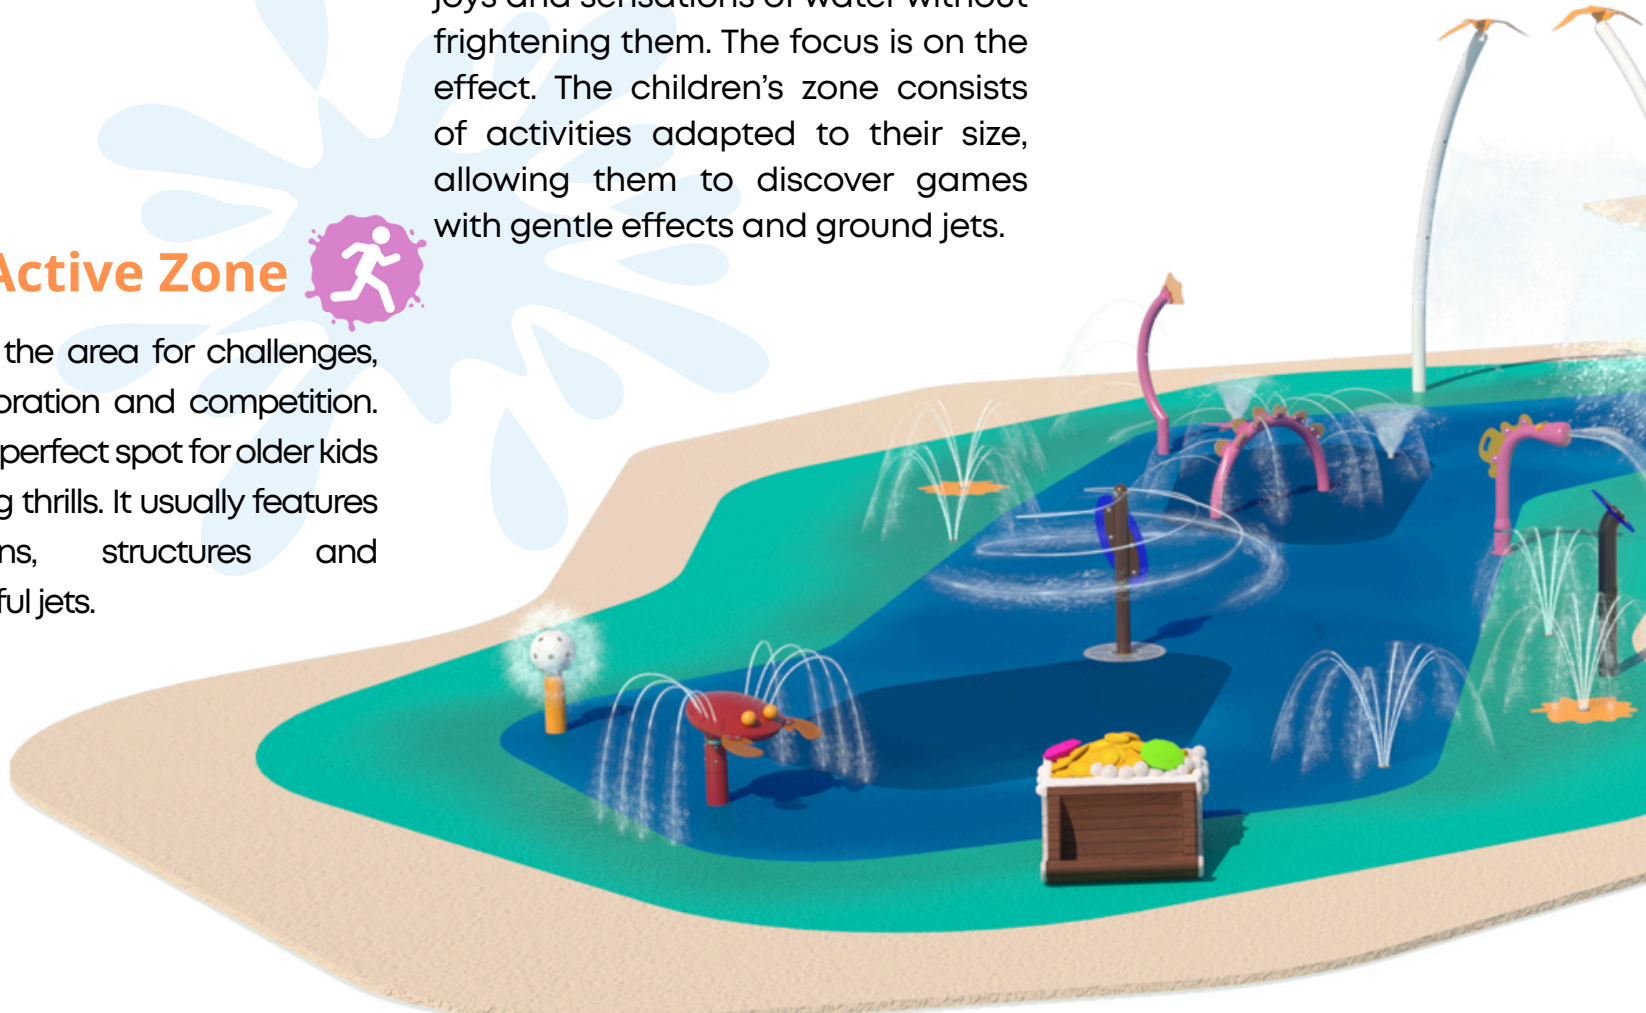

This area introduces toddlers to the joys and sensations of water without frightening them. The focus is on the effect. The children's zone consists of activities adapted to their size, allowing them to discover games with gentle effects and ground jets.

Active Zone

This is the area for challenges, collaboration and competition. It's the perfect spot for older kids seeking thrills. It usually features cannons, structures and powerful jets.

Family Zone

This area is suitable for all ages and is usually the central zone. All family members can have fun thanks to adapted structures. They can discover games with moderate interactive features and various shapes and power levels.

COLORS

Premium materials and finishes, built to endure harsh temperature changes and resist UV damage year after year.

Polyester Powder Coating

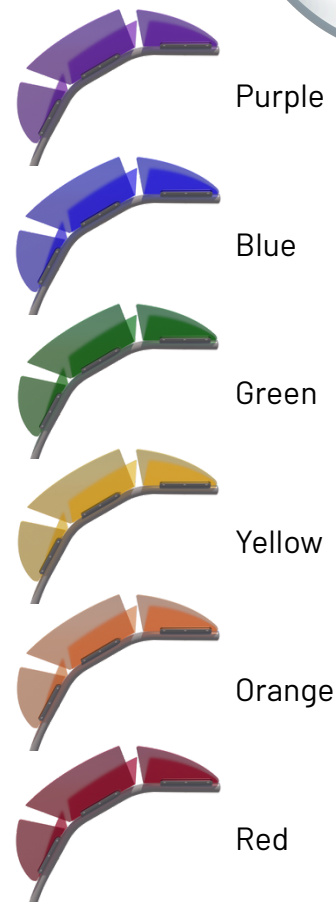

Sand 1015	Lemon 1018	Orange 2008	Red 3020
Brick 3001	Pink 4003	Purple 4008	Sun 1028
Aqua 6027	Steel 5007	Azure 5012	Cobalt 5017
Sapphier 5010	Midnight 5003	Forest 6005	Grass 6029
Cactus 6017	Lime 6018	Chocolate 8014	Snow 9003
Charcoal 9005	Silver 99999	Iron texture	

Due to printing limitations, the colors shown may differ slightly from the actual colors.

Why a Water Cannon Is
Ideal in a Water Play Area:
A water cannon adds **interactivity**,
movement, **fun**, and **strategy** to a
water play area. It's an element that
transforms a passive play space into
a lively, social, and engaging
environment.

Game Activator

Aquajeux activators are unique in the industry because they are built according to multiple usage parameters, ensuring compatibility with all types of activations available on the market.

ACTIVATION DEVICES

Simple Activation

The touch-button activator allows users to start the play area with just a light touch no need to press. This technology instantly triggers the water sequence, optimizes water consumption through programmable settings on the control panel, and enhances user interaction for a more engaging experience. The system operates on a 24-volt direct current power supply.

SEQUENCE & PROGRAMMING

AquaJeux's operating sequence stands out in the industry thanks to its random algorithm, delivering a constantly renewed experience with no repeated patterns.

Touch Screen

The game sequence parameters are fully managed through the user interface integrated into the control panel. AquaJeux was the first to introduce this type of interface, which has since become a standard across the industry.

Operating Framework

The program generates up to a thousand possible combinations per second and automatically selects the one that matches the parameters set by the manager. This random sequencing delivers key advantages:

Renewed Experience: The sequence is never repeated, increasing play value as users can never predict which features will activate or when..

Complete Autonomy: No need to contact the manufacturer or distributor to replace or add a sequence – it is generated randomly.

Management Flexibility: Flow rate, operating hours, and cycle times can be adjusted directly through the control panel without external intervention.

CONTROLS & WATER MANAGEMENT

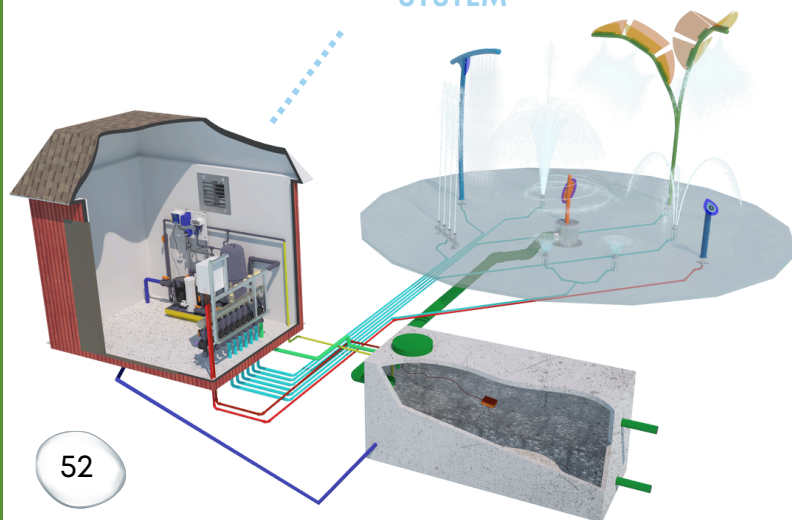

Infinite Combinations

The operating framework is the heart of the random program. It allows the manager to handle all situations. The parameters below can all be modified by the manager on site using the user interface. It is important to understand that all these parameters are managed simultaneously by the controller to optimize both the play value of the Aquajeux area and the water management:

OPTIONS

- Recirculation management
- Water-saving mode
- Remote connectivity
- Automatic purge cycle
- Programmable sequences
- Temperature threshold

RECIRCULATION SYSTEM

Zones: childhood, family, and active (1, 2, or 3 zones depending on the case).

Operating hours: time period during which the games can be activated by users. 24/7.

Separate operating hours: time period during which certain games can be activated outside the main operating hours.

Operating time: duration of the sequence. After this period, the user must activate again.

Flow limit: maximum total flow of the play area. Modifiable at any time.

Minimum and maximum time: optimization of the play area.

Grouping of games: better control of flow and pressure.

Random, permanent, continuous, or inactive mode: operational freedom. This feature, included in the Aquajeux program, is one of the most important and innovative.

WATER MANAGEMENT

DESIGNED TO LAST

The water management system is designed with high-quality products that meet engineering requirements and comply with high plumbing standards.

Durable, Maintenance-Free Materials

All internal components are made of brass or stainless steel. The balancing valves, originally plastic, have been replaced with precision-adjustable brass models. Only the PVC solenoid valves remain, a material that has proven its reliability over the years.

Tested and Fully Equipped Delivery

The water management system is designed to meet current standards and integrates all essential components, including a pressure reducer, double check valve, and water hammer arrestor, and others. It is mounted on robust stainless-steel supports, allowing for wall-mounted, cabinet or vault installation. Cabinets and vaults are available from Aquajeux. Each assembly is factory-tested and delivered ready to use, complete with all accessories required for the optimal operation of the splash pad.
