

UMBRELLA

5410i

DESCRIPTION

The Umbrella structure features a small water dome at its top, where water gently flows down, mimicking rain falling from the sky. It creates a sheltered area, allowing young water enthusiasts to take cover underneath. The panels, made of translucent Ecolor polymer, cast colorful shadows on the ground as sunlight passes through, reminiscent of a rainbow after the rain.

ADDITIONAL INFORMATION

Number of users : 1 - 6

Interaction : No

Water effect : Waterfall

Product type : ST-Structure

Installation : Embedded or unifix installation

PLAY VALUE

Childhood

Active

Family
